Two layer configurations in the same25 runs after6 prior tasks (posthoc)
Same membership at start and at750
Open = start; filled =750; arrows show movement
Layer2 mean phi'
Layer1 mean phi'
L2 smaller (n=17)
L1 smaller (n=8)
Within L2-smaller group: slope=-0.51, R2=0.88
Within L1-smaller group: slope=-0.22, R2=0.32
a=.001, seed4
L1 smaller despite low product
Updates to sustained90
Product of layer-mean phi' at750
